

Questions to Ask if You are Considering Proton Radiation

Men with prostate cancer deserve answers clearly supported by evidence **published** in medical journals. 4 questions you **MUST** ask your proton doctor if you are considering proton beam treatment:

1. Have you *personally published* your 10-year proton beam results in a medical journal or presented them at an international conference?
2. For my stage of prostate cancer, what is the *published* likelihood that I will be cancer-free 10 years after proton beam radiation? (please show me the articles)
3. Why do experts report my risk for developing a new secondary cancer is greater after proton beam radiation than prostate seed implants?
4. What is the 10-year *published* likelihood of maintaining my erectile function and urinary control (continence) after proton beam radiation?
